

## Post Construction Steps

Some think of this as the end of the project but we're not content until you're satisfied with a fully functioning facility.

### Warranty

Your project may qualify for a one year or two-year warranty - an unprecedented offer in this industry. We proactively return to your building for periodic site check-ups, as a part of our warranty program.

### Commissioning

We're proud of our reputation for testing and commissioning projects the first time through.

- We develop checklists to ensure that each piece of equipment is ready to start.
- We conduct several walkthroughs to ensure that all items are completed.
- We train the owner and staff on environmental controls and electrical panels, and other features.
- We organize a close-out book of drawings, product data, warranties, and supporting documentation to assist with the formal acceptance and occupancy of the facility.
- We return at 6, 12, and 24 months to conduct walkthroughs.
- We are available to answer any questions or address any concerns that arise.

### Owner Installations

If you choose to arrange for additional amenities or necessities for your building, we are happy to coordinate with third parties and assist with details for a smooth finish.
