

DFCU FINANCIAL

In 2015, Ronnisch Construction completed the 4,500 square foot renovation of the DFCU Financial. The project transformed a former gas station with an attached two-car garage auto shop into a modern, customer-focused financial center. The renovation required significant structural updates, including the removal of automotive infrastructure, while maintaining the character of the original building. The result is a functional and welcoming space that reflects the credit union's commitment to serving the community.
