

LIFE SKILLS AUTISM ACADEMY

Ronnisch Construction Group served as Construction Manager for the 10,649-square-foot Life Skills Autism Academy in Harper Woods, Michigan, designed by ADA Architects. The center was developed to support early-intervention services for children with autism, creating a safe, structured, and engaging environment that mirrors a school setting while supporting specialized therapy programs.

Operated by Centria Autism, Life Skills Autism Academy provides center-based Applied Behavior Analysis (ABA) therapy focused on helping young children develop communication, social, and daily living skills that support long-term success. The thoughtfully designed facility supports individualized therapy programs, peer interaction, and school-readiness activities, giving children a supportive environment where they can build essential life skills and confidently prepare for future educational settings.
